1.1 Sensor System Software n-quirer TT V3 basic

For tablet PCs, laptops, notebooks, PC running Windows, in combination with all intelligent sensors from n-gineric providing:

- Graph recordings of
 - Torque vs. time
 - Torque vs. angle
 - Force vs. time
 - Force vs. displacement
- Automatic sensor identification
- Graph reading with up to 2,000 measurements per second
- Display resolution 5 digits plus decimal point
- Supports different physical units
- 2 control windows with internal or external triggering
- 2nd trigger value for angle control or displacement control
- Adjustable low pass filter (10 Hz to 500 Hz)
- Supports the loading of a reference graph for comparison
- Direct export of the graph reading into Excel
- Direct export of measurements results listing into Excel with SPC document template
- Direct sensor connectivity via USB or Ethernet

1.3 Torque Driver System Software n-quirer TD

n-quirer TD V2 is a software designed for **ng-TDH** and **ng-TDS** Torque Drivers. It provides parameter and program management, graphical visualization, and screw driving process data logging.

After connecting the Torque Driver, the system is being identified by showing the type, serial number, and torque range in the header line. The Torque Driver firmware version is shown at the bottom line.

Requirements to the PC system:

- Operating system Windows 11
- Screen resolution at least 1366 x 768 pixels
- Microsoft Excel 2007 or later or compatible Office package

n-quirer TD V2 Tightening Programs

General Parameters

General parameters like the number of steps of the tightening process, the unscrew parameters, the vacuum function and the tightening cycle time window can be configured here.

Screw Tightening Step Types

The screw tightening process can be defined by a sequence of 1 to 8 different steps.

There are 7 step types:

- Simple Torque Step
- Angle Step
- Average Angle Step
- Torque Step
- Time Step
- Snug Torque Step
- Delta Torque Step

Simple Torque Step

The Simple Torque Step facilitates the screw engagement and avoids cross threading.

If either the set threshold torque or the maximum angle of rotation is reached within the set screwdriving time, the screwdriving system proceeds to the next step, otherwise an error message is issued.

The acceleration ramp concerns the acceleration at the beginning of this screwdriving step, the angle of rotation limitation applies from the time the threshold torque is reached.

Angle Step

The angle step is used for fast, angle-controlled screwing in of the screw for process time optimization. The parameter angle of rotation must be set so that the head rest of the screw is not yet reached.

The acceleration ramp concerns the acceleration at the beginning of this screwdriving stage; in addition to the angle of rotation limitation, a torque window can also be specified.

Average Angle Step

The Average Angle Step is mainly used for measurement applications. Here the arithmetic mean of the torque is being calculated while the angle step is running. The mean value has to reach the minimum torque, but must not exceed the maximum torque.

Torque Step

The Torque Step provides a high level of process security by monitoring the torque window, the time window, the angle torque/angle gradient, and, as an option, the screw insertion depth.

Time Step

The Time Step provides a programmable residence time, with optional rotary motion in both directions under certain conditions, such as the specification of a torque window for testing purposes.

Snug Torque Step

The Snug Torque Step was designed to detect the torque just at the point when the screw is seated, that means when the screw head touches the surface of the part, just before additional torque will generate clamping force inside the screw joint. As soon as the screw is seated, the torque raises quickly, the torque vs. angle gradient changes, so it can be detected by appropriate parameter settings.

Delta Torque Step

The Delta Torque Step allows to apply an amount of torque providing proportionate clamping force to the screw joint, with monitoring of the programmed windows. It is especially used after the Snug Point detection. The target torque is variably calculated, depending on the Snug Torque (if the previous step was a Snug Step), and the programmed limits. The torque delta can be varied by setting the target limits, because if the snug torque is high, it allows a higher amount of added torque, compared to a low snug torque.

The option of automatically calculating additional torque reduction, proportional to the snug torque, is useful in many cases where the load bearing capacity of the thread is heavily dependent on the snug torque. The calculation is made according to the two selected torque limits of the previous step and the target torque limits.

1.4 Torque Driver System Software n-quirer TD advanced

n-quirer TD V2 advanced is software for programming the tightening parameters, for the graphical display of progress curves and for documenting the tightening process data, with an additional sequencer module with user guidance.

The sequencer editor module enables the definition of an assembly step-by-step sequence. Each step can be a screw driving step or any other assembly operation, with instructions precisely described by text and images. The operator is guided through that process according to the programmed sequence. The sequence can be started by scanning a product code via barcode reader, optionally followed by scanning up to 10 parts of a workpiece assembly.

After the assembly sequence has been finished (or canceled), the overall result is documented in a log file with details and the evaluation (G/NG) of each process step, including the scanned workpiece identity information.

The screw bits used are monitored in conjunction with the **ng-BPC** bit selector and screw position controller. The user is prompted to change bits by pick-by-light signals. When the **ng-LAP400** device holder with position sensors is connected, the sequence of the tightening sequence can also be checked according to the programmed tightening coordinates. The screw coordinates are taught with a simple click of the mouse in the sequencer editor. The screw driving process is then only enabled in the allowed tightening position.

PC system requirements:

- Operating system Windows 11
- Screen resolution at least 1366 x 768 pixels
- Microsoft Excel 2007 or later or compatible Office package

----------------	----------------------

Since it is a modular system, the following combinations are possible:

1. **ng-TDH** Sensor Torque Driver and **n-quirer TD advanced** in the sequencer mode

2. **ng-TDH** Sensor Torque Driver and **n-quirer TD advanced** in the sequencer mode, with a barcode reader for the sequence start and for the assignment of the workpiece identities (up to 10 parts of an assembly can be scanned one after the other)

3. **ng-TDH** Sensor Torque Driver and **n-quirer TD advanced** in the sequencer mode, with a barcode reader for the sequence start and for the assignment of the workpiece identities, additionally with the **ng-BPC** for the assignment of screw bits according to the respective screw position (removal via Pick-by-Light signaling)

4. **ng-TDH** Sensor Torque Driver and **n-quirer TD advanced** in the sequencer mode, with a barcode reader for the sequence start and for the assignment of the workpiece identities, additionally with the **ng-BPC** for the assignment of screw bits according to the respective screwing position, and **ng-LAP400** device holder for the tightening position control (connected to the **ng-BPC**).

The combination of **ng-TDH** Sensor Torque Driver and **n-quirer TD advanced** in the sequencer mode with a barcode reader, with the **ng-BPC** bit selector and the **ng-LAP400** position control enables zero-error production with seamless process data documentation.

All functions are monitored, visualized and edited within the **n-quirer TD advanced** software. The system is characterized by its intuitive usability and minimal setup-time, typically 30 minutes, for programming and teaching a complete new assembly sequence.

3 Intelligent Force Sensors

- Based on Strain Gauge Technology
- Digital and Analog Interfaces

- Compression Force Sensors
- Donut-shaped Compression Force Sensors
- Compression and Tension Force Sensors

Measurement Ranges:

4 Sensor Torque Driver Systems

4.1 Handheld Sensor Torque Drivers ng-μTDH

- Components integrated in the handpiece:
- Static strain-gage based torque sensor
- Incremental angle encoder
- Brushless DC Motor
- Planetary gearbox
- PCB-Assembly providing the following functions:
 - Torque measurement signal conditioning and 24-bit analog to digital conversion
 - Encoder readout
 - Data communication to the main control board
 - Hand button signaling
- Main control board mounted in the foot housing
- Vacuum suction through the handpiece
- Housing parts made of anodized aluminum and stainless steel

The Adaptive Screw Tightening Strategy provides the detection of the snug torque during the rundown of the screw. Depending on the snug torque, an additional constant or proportionate amount of torque can be applied to the screw joint to achieve repeatable clamping force.

4.2 Handheld Sensor Torque Drivers ng-TDH

- Torque Range:
 - 0.01 – 0.1 Nm
 - 0.02 – 0.2 Nm
 - 0.05 – 0.5 Nm
 - 0.10 – 1.0 Nm
- Ultimate Torque/ Angle Measurement Precision:
 - Strain Gauge based Rotary Torque Sensor integrated at the Bit Chuck
 - 24 bits A/D Converter Resolution of the Torque Measurement at the Rotary Part
 - Brushless Digital Signal Transmission from the Rotary to the Stationary Part
 - 0.1 Degrees Resolution of the Angle Measurement directly at the Bit Chuck
- Massive Aluminum Housing
- Brushless DC Motor Technology
- Adaptive Screw Tightening Strategies
- All Controls integrated
- Industry-4.0-compliant
- Precise in measurement and highly productive

The **Adaptive Screw Tightening Strategy** provides the detection of the snug torque during the rundown of the screw. Depending on the snug torque, an additional constant or proportionate amount of torque can be applied to the screw joint to achieve repeatable clamping force.

4.3 Handheld Sensor Measurement Drivers ng-TD HQ

These systems are designed for precise detection of torque and angle of rotation at low speed and are therefore ideal for measurement and adjustment processes. In terms of function, they are otherwise identical to the **ng-TDH** systems.

4.4 Handheld Sensor Torque Drivers ng-eTDH

- Torque Range:
 - 0.1 – 1.0 Nm
 - 0.2 – 2.0 Nm
 - 0.4 – 4.0 Nm
 - 0.5 – 5.0 Nm
 - 1.0 – 10.0 Nm
 - 2,0 – 20,0 Nm
- Ultimate Torque/Angle Measurement Precision:
 - Strain Gage based Rotary Torque Sensor integrated at the Bit Chuck
 - 24 bits A/D Converter Resolution of the Torque Measurement at the Rotary Part
 - Brushless Digital Signal Transmission from the Rotary to the Stationary Part
 - 0.1 Degrees Resolution of the Angle Measurement directly at the Bit Chuck
- Massive Aluminum Housing
- Ergonomic handle
- Push-to-Start
- Front-LEDs
- Brushless DC Motor Technology
- Adaptive Screw Tightening Strategies
- All Controls integrated
- Industry-4.0-compliant
- Precise in measurement and highly productive

The **adaptive screwing strategies** are used to compensate for fluctuations in the head contact torque when screwing in thread-forming screws. The aim of a clamping force that is as constant as possible is thus achieved even with critical screw connections.

4.5 Stationary Sensor Torque Drivers ng-TDS

- Torque Range:
 - 0.005 – 0.05 Nm
 - 0.01 – 0.1 Nm
 - 0.02 – 0.2 Nm
 - 0.05 – 0.5 Nm
 - 0.10 – 1.0 Nm
 - 0.20 – 2.0 Nm
 - 0.40 – 4.0 Nm
 - 0.50 – 5.0 Nm
 - 0.60 – 6.0 Nm
 - 1.00 – 10.0 Nm
- Ultimate Torque/Angle Measurement Precision:
 - Strain Gage based Rotary Torque Sensor integrated at the Bit Chuck
 - 24 bits A/D Converter Resolution of the Torque Measurement at the Rotary Part
 - Brushless Digital Signal Transmission from the Rotary to the Stationary Part
 - 0.1 Degrees Resolution of the Angle Measurement directly at the Bit Chuck
- Massive Aluminum Housing
- Brushless DC Motor Technology
- Adaptive Screw Tightening Strategies
- All Controls integrated
- Industry-4.0-compliant
- Precise in measurement and highly productive

The **Adaptive Screw Tightening Strategy** provides the detection of the snug torque during the rundown of the screw. Depending on the snug torque, an additional constant or proportionate amount of torque can be applied to the screw joint to achieve repeatable clamping force.

4.6 Stationary Sensor Measurement Drivers ng-TDSQ

These systems are designed for precise detection of torque and angle of rotation at low speed and are therefore ideal for measurement and adjustment processes. They are otherwise functionally identical to the **ng-TDS** systems.

Article Number	ng-TDSQ500-xi
Torque Range	50 to 500 cNm
Torque Measurement Accuracy	1 % of the F.S.R.
Angle Measurement Resolution	0.1 Degrees
RPM Range	5 to 300 min ⁻¹
Bit Drive	1/4" Hexagon
Dimensions	212 x 58 x 35 mm
Weight	0.98 kg
Interface	Digital to ng-TDC

5 Systems and Components for Automated Assembly

5.1 Blow Feeding Module ng-BF400

The blow feeding module is designed for highly effective automated screw tightening applications. It is built of the following components:

- Fixture unit, prepared for mounting of the module at a robot (e. g. a SCARA or Cartesian Robot)
- Pneumatic precision slide for the driver stroke
- Mouthpiece Assembly with bracket set

The screws are blown from the screw feeder unit through a tube into the mouthpiece. They are stopped by the spring balanced brackets in alignment with the screw driver spindle. The tightening process begins, when the spindle moves downwards pushing the screw through the brackets towards the workpiece while rotating slowly.

The mouthpiece and the brackets sets are designed and manufactured in accordance with the geometric requirements of the parts and screws.

The module is prepared to carry the torque driver types

- ng-TDS50-hi
- ng-TDS100-hi
- ng-TDS200-xi
- ng-TDS400-xi
- ng-TDS500-xi
- ng-TDS600-xi

The total weight of the unit, including the torque driver spindle is approximately 2.0 kg.

The modules are based on a standard design. Most of the time, customization of application specific parts is necessary. It can be done on request after a profound technical clarification.

5.2 „Flying Handling“ Module ng-FLH400

The Pick-&-Place feeding module is designed for highly effective automated screw tightening applications. It is built of the following components:

- Fixture Plate, prepared for mounting of the module at (e. g.) a Cartesian robot
- Pneumatic precision slide for the driver stroke
- Screw handling assembly with vertical / horizontal movements via pneumatic precision slides

While the screw is being tightened, the next screw can be blown into a little dome mounted in the screw handling. When the screw driver spindle has moved back into the upper position, the handling brings the screw to the vacuum nozzle, then it moves back into the loading position. This can happen while the robot moves to the next screw joint position. The process time is significantly shorter than with the normal Pick-&-Place.

The vacuum adapter assembly with the nozzle is attached to the torque driver spindle.

The module is prepared to carry the torque driver types

- ng-TDS50-hi
- ng-TDS100-hi
- ng-TDS200-xi
- ng-TDS400-xi
- ng-TDS500-xi
- ng-TDS600-xi

The screw spindle is equipped with a vacuum adapter (see 6.8) for sucking the screw.

The total weight of the unit, including the torque driver spindle is approximately 3.4 kg.

The modules are based on a standard design. Most of the time, customization of application specific parts is necessary. It can be done on request after a profound technical clarification.

6 Accessories

6.1 Sensor Interface ng-TC-ai

Intelligent sensor interface with analog input for torque and force sensors based on strain gauges

- Sampling-rate 2 kHz / 4 kHz
- Signal-LED
- Aluminum casing
- Operating temperature 0 °C bis +40 °C
(+32 °F to 104 °F)
- Dimensions 50 x 50 x 30 mm
- Interface Option 1:
 - USB
 - Ethernet
 - *ng-Link*

Article Number	Description
ng-TC-ai	Sensor interface for sensors based on strain gauges
ng-TC-ai-5	Sensor interface for voltage input 0 – 5 V
ng-TC-ai-10	Sensor interface for voltage input 0 – 10 V

- Interface Option 2:
 - USB
 - Ethernet
 - Encoder

Article Number	Description
ng-TC-ai-e	Sensor interface for sensors based on strain gauges and encoder
ng-TC-ai-5-e	Sensor interface for voltage input 0 – 5 V and encoder
ng-TC-ai-10-e	Sensor interface for voltage input 0 – 10 V and encoder

6.2 Interface Extension ng-eTTx

For all intelligent torque and force sensors with *ng-Link* interface

Article Number

ng-eTTx, Cable 1,8 m
ng-eTTx, Cable 5,0 m

- 8 isolated digital Inputs, NPN or PNP configurable, voltage range 12 – 36 V
- 8 isolated digital Outputs, NPN or PNP configurable, voltage range 12 – 36 V
- Supply voltage 24 V DC 1 A (sensor consumption included)
- Direct signaling of control window status
- Integrated in a SUB-D-25 housing
- Connector compatible to the *ng-Link* interface
- Cable length 1.8 m or 5,0 m

6.5 Torque Driver Controller Interface ng-TDC

The Digital Interface Extension **ng-TDC** for Torque Driver Spindles **ng-μTDH-*i***, **ng-TDH-*i*** and **ng-TDS-*i*** can manage 48 screw tightening programs which can be addressed directly via digital I/Os. Additional interfaces provide versatile connectivity to external controls.

Article Number	ng-TDC

6.6 Program selector switch ng-TD-PSW16

The program selector switch **ng-TD-PSW16** is suitable for n-gineric screwing systems that are equipped with the screw controller **ng-TDC**. It allows the external manual selection of the desired tightening program via a rotary switch with 16 positions. It's connected to the digital I / O interface of the **ng-TDC**.

- Selection of program 1 bis 16
- Cable length 1.8 m
- Connector: SUB-D-26-HD

6.7 Carbon Telescopic Arm ng-TA900

The telescopic support arm made of carbon fibers absorbs the reaction torque of the screw drive. It reduces the workload when screwing and at the same time prevents incorrect measurements of the angle of rotation during the screwing process.

It is attached to the workplace using a bracket and, thanks to its smooth operation, ensures optimal freedom of movement in the room.

Characteristics:

- Extension path: 460 - 950 mm (usable max. 900 mm)
- Maximum torque load: 12 Nm
- retaining clip

Article Number	ng-TA900
----------------	----------

6.8 Linear-Arm with position monitoring ng-LAP

Device holder with vertical linear guide and two hinge axes

- Horizontal travel 400 mm, 450 mm or 500 mm radial
- Vertical travel 300 mm or 560 mm

The arms have a solid profile construction with a double ball roller guide mounted behind it, which guarantee a smooth running in the Z direction.

The joint axes are double-supported, and the bearing clearance is setting precisely. This setup guarantees a massive improvement in positioning repeatability and handling.

The joint axes are equipped with high-resolution position sensors whose signals are read out via the **ng-PBC** bit selector and screw position controller.

6.9 Bit Selector and Tightening Position Controller ng-BPC

The **ng-BPC** device was designed to control the bit change within the screw tightening sequence as programmed in the **n-quirer TD advanced** application. The operator is requested to change the bit by Pick-by-Light signals.

Additionally, with the position sensors of a device holder connected, the system can also ensure that the screw tightening sequence is done according to the programmed tightening coordinates.

6.10 Foot Switch ng-Tx-FSW

The footswitch **ng-Tx-FSW** can be used as an external operating element for the **n-quirer TT** and **n-quirer TD** application. It is connected to the PC running the software via USB. The following functions are available:

- External measurement triggering (**n-quirer TT**)
- Quick graph export into Excel format (for multi-graph collection) (**n-quirer TT**)
- Start of the screw tightening process (**n-quirer TD**)

Conector: USB-A, cable length 2.5 meters

Article Number	ng-Tx-FSW

6.11 Barcode Reader wireless ng-BCR

The barcode reader can be used in conjunction with the **n-quirer TT** and **n-quirer TD** software for the following functions:

- Load measurement or sequencer programs
- Identification of tools
- Identification and assignment of workpieces

Article Number	ng-BCR
