

HST BATTERY PTB-2040

Power for professionals: The PTB-2040 battery

More capacity, more safety, full HST compatibility.

The PTB-2040 is the next step in the development of the HST battery platform. Thanks to the latest cell generation, offers **4Ah capacity** – that's **+60%** more than its predecessor, the PR-1825, with only slightly larger dimensions.

A modern **battery management system** with comprehensive protection functions guarantees maximum safety and reliability in all work situations. The integrated **charge status indicator** allows you to keep an eye on the remaining energy supply at all times.

The PTB-2040 is, of course, **fully compatible with all HST tools and chargers.**

As a replacement for the HST-PR-1850 and HST-PR-1825, it consistently continues the platform. The previous 1825 and 1850 batteries are available while supplies last.

The PTB-2040 will be **available starting July 1st, 2026**, and is already setting the new standard for the HST battery line.

Technical data

Voltage [V]	18
Capacity [Ah]	4
Weight [g]	620 g
Length [cm]	13,5
Width [cm]	8,7
Height [cm]	5,6
Operating temperature	0...45 °C / 32...113 °F
